Fourier
modes
m
|m| ≤ 5
665 complex modes
Vector
potentials
k
e2
e1
Craya–Herring basis
latent: 5320 reals
Conditional
flow matching
x_t
x0
x1
v_θ(x, t, c)
noise → data, straight paths
conditioned on log η
Sampling
the flow
x0
x1
dx/dt = v_θ
integrate the flow
t = 0 → 1
Decoding
by the curl
B
B = ∇ × A (u alike)
∇·B = 0
Generated: Fourier modes of the potentials
every sample: ∇·B = 0
